

Etch Tower US

An acid etched LED floor light inspired by the logic of pure mathematics. Etch Light is made up of 0.4mm digitally etched brass sheets. The detailed pattern creates a mass of intricate shadows when lit. This work by Tom Dixon is a limited edition prototype and never made full production. This example shows wear from being an exhibition piece. Only one piece available. Made from brass sheets, the pattern is photo etched: acid dissolves the exposed parts leaving behind the unexposed metal creating the pattern. The brass is lacquered to prevent oxidization.
