

Mobius Light

Scott Daniel Design

The Mobius fixture design was inspired by the scientific mobius strip- a contiguous strip of DNA, similar to the infinity symbol, with no beginning or end. To make these pieces, a single long ribbon of wire mesh is wrapped in a coil and then manipulated to create the intertwining form. The ribbon of mesh can be 25 to 50 feet long! Where the ends of the ribbon connect is different each time, leading to unique forms for each and every fixture. Light is diffused through the mesh openings and around each overlapping layer creating a glowing effect

Starting at: \$8,400

Various. See spec sheet in downloads below.
